Summary

The need to solve problems efficiently and creatively has been the drive toward my new career as a Software Engineer. I strive to empathize with my users and fulfill their needs through the technical skills and abilities I have developed in order to approach challenges with creativity and confidence. When I am not wearing the hat of an engineer, I recall my role as a writer and seek out opportunities to serve as inspiration for the next chapter in my memoir.

Skills

Javascript	jQuery	Postgresql	Bulma
React	Express	Python	Bootstrap
Redux	Ruby on	Github	
NodeJS	Rails	Heroku	

Experience

General Assembly

October 2017 - January 2018

Web Developer Immersive

Acquired skills and built fluency in web development through an intensive three-month program, focusing on object-oriented programming, back-end frameworks, Javascript libraries, and best MVC practices. Collaborated with UX designers to develop a weather platform through sprint planning and daily stand ups.

Developed a platform for School Psychologists to record, update, and track progress of students who receive Individualized Education Plans. Utilized React library during front-end environment, and developed a Ruby on Rails API consisting of student records.

Education

General Assembly

October 2017 - January 2018

Web Developer Immersive

Full-time Web Developer course, including 14 weeks of training.

Skidmore College

September 2010 - May 2014

BA in English, Minor in Studio Art
